

- U = Not detected above sample detection limit
- BOLD results are detections
- (TIC) = Tentatively Identified Compound
- ug/m³ = Micrograms per cubic meter
- (a) = TIC for ERG Lab
- (B) = EPA Regional Screening Levels (RSLs): Risk-based concentrations derived from standardized equations combining exposure information assumptions with the latest EPA toxicity data. RSLs are considered by EPA Toxicologists to be protective for humans (including sensitive groups) over a lifetime. The RSLs have been adjusted for an appropriate exposure scenario which has been reached in consensus with LDEQ toxicologists.
